## 1 APPLICATION

NR30 meter is a digital programmable instrument designed to measure network parameters of single-phase 2 -wire and three-phase 3 and 4 -wire balanced and unbalanced systems. The measured values are displayed on a $20 \times 4$ LCD character display. The meter enables controlling and optimizing the operation of power electronics devices, systems and industrial installations.
It provides measurement of: RMS voltage and current, active, reactive and apparent power, active, reactive and apparent energy, power factors, frequency, harmonic currents and voltages / up to 51 st /, THD of current and voltage, average active and apparent power, P Demand, S Demand, averaged current I Demand $/ 15,30$ or 60 minutes/. Voltages and currents are multiplied by given voltage and current ratios of measuring transformers / for indirect connections /. Indications of power and energy take into consideration values of programmed ratios. The values of the measured quantities can be transmitted to the host system through RS485 interface or Ethernet interface, relay outputs signal overruns of the selected parameters.
The meter has a galvanic separation between the individual blocks of:

- power supply,
- voltage inputs,
- current inputs (for versions $\ln 1 \mathrm{~A} / 5 \mathrm{~A}$ ),
- RS485 Interface,
- Ethernet Interface:
- alarm outputs,

## 2 METER SET

Complete set of the Analyzer includes:

1. NR30 meter 1 pc.
2. User's manual

1 pc.

## 3 BASIC REQUI REMENTS, OPERATI ONAL SAFETY

In terms of operational safety, the meter meets the requirements of DIN EN 61010-1.
Safety instructions:

- The meter installation and connection should be made by qualified personnel. All available protection requirements must be taken into consideration.
- Before turning the meter on verify the connections.
- Prior to removing the meter housing, always turn the supply off and disconnect the measurement circuits.
- Removal of the meter housing during the warranty period voids the warranty.
- The meter meets the requirements for electromagnetic compatibility in industrial environment.
- A switch or a circuit-breaker should be installed in the building or facility. It should be located near the device, easily accessible to the operator, and suitably marked.

## 4 INSTALLATION

The meter is adapted for installation in a modular installation switchgears on a 35 mm support rail. The housing of the meter is made of plastic.
Housing dimensions are $105 \times 110 \times 60 \mathrm{~mm}$. Outside the meter there are screw terminal strips that allow connection of external wires with a cross-section up to $5.3 \mathrm{~mm}^{2}$ / indirect measurements/ and up to 16 $\mathrm{mm}^{2}$ /direct measurements.

Fig.1. Overall dimensions of NR30 meter

## 5 DESCRIPTION

### 5.1 Current inputs

All current inputs are galvanically isolated (internal current transformers). The meter is adapted for direct connections / up to 63 A / or for use with external current transformers / 1 A or $5 \mathrm{~A} /$. Displayed values of currents and derivative quantities are automatically converted according to the introduced external current transformer ratio.

### 5.2 Voltage inputs

Quantities at voltage inputs are automatically calculated by the amount of introduced ratio of the external voltage transformer. Voltage inputs are defined in the order as $3 \times 57.7 / 100 \mathrm{~V}$ up to $3 \times 100 / 170 \mathrm{~V}$ or $3 \times 230 / 400 \mathrm{~V}$ up to $3 \times 400 / 690 \mathrm{~V}$.

### 5.3 Connection of the meter

Description of the meter external terminals is shown in Fig 2.
a)

b)

Fig.2. Connection of the meter: a) in the version for indirect connections (1/5 A)
b) in the version for direct connections ( 63 A )

Semi-direct measurement using 2 current transformers in 3 - wire network.

Indirect measurement using 2 current transformers and 2 or 3 voltage transformers in 3 - wire network.

Fig.6. Input signal connection in 3-phase 3 - wire network

## 6 COOPERATION WITH S4AO

For NR30 versions with the S4AO block of 4 analog outputs, side connector for connecting blocks is included. The connector can also be ordered separately: order code 24-171-01-00016

Fig.7. Connecting blocks using the side connector

Fig.8. Connection of NR30 with S4AO using RS485 interface
The S4AO module communicates with the NR30 meter via the RS485 Modbus Master interface, therefore cooperation with S4AO excludes the use the NR30 meter RS485 interface for communication with another Master.

## 7 NR30 PROGRAMMI NG

### 7.1 Frontal panel

Fig.9. Frontal panel
NR30 meter has 3 buttons and a $20 \times 4$ LCD character display.
Description of the frontal panel:
$\pm$

7 4
$\square$
value increase key and moving up
button to decrease the value and moving down
accept key
USB socket

V,A,W,var, VA, units of displayed quantities
$k, M, G_{\text {kilo }}=10^{3}$, Mega $=10^{6}$, Giga $=10^{9}$
Wh, varh,
Hz,
$\mathrm{U} 1, \mathrm{I} 1, \mathrm{P} 1, \ldots$ Indications of displayed ..EnQ parameters

L, C markers of the type of load inductive, capacitive

The values of measured parameters are presented on active pages selected by subsequent pressing of the buttons ${ }^{\boldsymbol{A}}$ (next page) or ${ }^{\boldsymbol{T}}$ (previous page).
Page size is determined by any 3 quantities selected from Table 1 and displayed on the screen. Defining pages is described under Displaying mode.

The information bar at the top of the screen shows the status of the alarm outputs, alarm conditions, file archive memory status, archiving status. There is also an Ethernet connection symbol on the information bar, indicators of receiving and transmitting data to the RS485 line. In the case of reverse phase sequence, the symbol "!" flashes. When displaying the minimum, maximum or harmonic values, the corresponding information appears.

Fig.10. Information bar

| Symbol |  |
| :---: | :--- |
| M N | Pressing the <br> the displayed quantity. |
| MAX | If voltage signals are connected in reverse sequence, the symbol indicating the phase <br> sequence error flashes. |
| A1, A2 | Status of alarm outputs. In the event of an alarm (s), the corresponding symbols are <br> displayed. |
| 12 Signaling of meeting the alarm conditions |  |
| M $^{\text {mo }}$ | Percentage of usage of the file archive memory, e.g. M |

### 7.2 6.2. Messages after Switching the Supply on

### 7.3 Starting operation

When power is turned on, the meter displays the logo, NR30 meter name, version, current firmware version and MAC for versions with Ethernet, and then switches to measurement mode displaying the page which was set as the last one. Displayed information:

Fig.11. Welcome screen
NR30 - meter type, brand
Bv: 01.06 - bootloader version no., Fv: 0.80 - firmvare version no.
$\mathrm{U}: 3 \times 230.0 . .3 \times 400.0 \mathrm{~V}$ - voltage versions
63 - current versions

### 7.4 Language selection

The preset language is English. To select a different language, press and hold the button ${ }_{\text {I }}$ for about 10 seconds. The language selection menu will then appear. The language selection is made with the
buttons and then confirmed again by pressing the accept button.

## 8 OPERATI NG MODES

The NR30 meter has 9 operating modes:
Measurement - normal operation mode. The values of quantities are displayed according to preprogrammed pages or pages configured by the user in the Displaying mode.
Parameters - configuration of parameters of the meter,
Alarms - alarm configuration Alarm 1, Alarm 2,
Displaying - configuration of displayed pages,
Archiving - configuration of archived quantities,
Ethernet - configuration of Ethernet interface parameters,
Modbus - configuration of RS485 interface parameters, Settings - settings: password, language, time, date, Information - preview of program version, serial no., MAC address, To enter from the Measurement mode into any mode, press and hold the $\boldsymbol{H}_{\text {| }}$ button for about 3 seconds.

Use buttons $\triangle$ to select the appropriate mode and accept with
Return to the measuring mode is done by pressing at the same time

Fig.12e. Programming matrix

### 8.1 Measurement mode

In the Measurement mode, the values of quantities are displayed acc. to the pre-programmed or userconfigured pages in the Displaying mode.
The change of the page is done by pressing $\Delta$ (next page) or $\nabla$ button (previous page). Pressing the button displays the minimum, maximum or current value (no symbol) of the displayed quantity. Resetting minimum values is done by brief pressing the button, and then $\nabla$ ; resetting maximum values by pressing respectively
and $\Delta$

When displaying inductive or capacitive reactive power or energy, a marker is displayed that indicates the nature of the load "L" at inductive load or "C" at capacitive load.
When displaying active energy, the "+" sign displays active energy import or "-" active energy export.
Exceeding the upper or lower indication range is indicated on the display by $\wedge \wedge \wedge \wedge$ or $\vee \vee \vee \vee$. When measuring averaged values ( P DMD, S DMD, I DMD ) single measurements are done with a 0.25 second quantum. Averaging time can be chosen: 15,30 or 60 minutes. Until the time all averaged samples are obtained, the values are calculated from already measured samples.
The current in the neutral wire IN is calculated from phase current vectors.

Fig.13. Screen of the measuring mode of the meter

### 8.1.1 Measurement of voltage and current harmonics

The choice of harmonics is made by selecting page 23 dedicated to displaying harmonic values of voltages U1, U2, U3 and currents I1, I2, I3 simultaneously for 3-phases. The number of the displayed harmonic can be changed in the range $2 . .63$ after pressing the button $\qquad$ and then or

Fig. 14 Screen 23 - visualization of harmonics

### 8.2 Parameters mode

This mode is used to set the meter parameters. To enter the Parameters mode, press the button

Fig.15. Screen for selecting Parameters mode
$\square$ for approx. 3 seconds, and then press the ${ }^{\square}$ or ${ }^{\square}$ select the Parameters mode and accept with the button $\leftrightarrows$. Access to configuration of parameters is protected by password, if it has been introduced and is different from zero. When the password is 0000 , the password prompt is bypassed. If the password is incorrect, the message "Incorrect password" is displayed. Read-only menu." is displayed. Then you can view the parameters, but the changes are blocked.
When the password is valid or not entered, we can set values according to Table 1.
Using $\square \square$ we select a parameter and confirm using the button $\square$. Then using $\square \square$ we select the parameter feature or the desired parameter values are set. The active position is indicated by the cursor pressing the button .The selected characteristic or value of the parameter should be confirmed by procedure press the button $\rightarrow$ wait for about 120 seconds. Exit the Parameters selection menu after pressing the button again $\Delta \boldsymbol{\square}$ or, after waiting for about 120 seconds.

Table 1

| No. | Parameter name | Characteristic / value | Description | Default value |

| 15 | Curr connector 4-6 | I1,-I1,I2,-I2,I3,-I3 |  | 12 |
| 16 | Curr connector 7-9 | I1,-I1,I2,-I2,13,-I3 |  | 13 |
| 17 | Del energy counters | No, active, reactive, apparent, all | Resetting watt-hour meters | No |
| 18 | Del demand values | No, Yes | Resetting averaged values | No |
| 19 | Set defaults param | No, Yes | Default settings of parameters | No |

$\bullet$ During a parameter change, it is checked whether the value is within the range. In the case of setting the value out of range, the value is set to the maximum value (when the value is too high) or to the minimum value (when the value is too low).
$\bullet$ When changing the parameter "Voltage L-N", the parameter "Voltage L-L" is automatically converted $(x \sqrt{ } 3)$,
when changing the parameter "Voltage L-L", the parameter "Voltage L-N" is automatically converted ( $x \sqrt{3}$ ),

For the configuration of NR30 meters you can also use our free eCon software available at www.lumel.com.pl.

### 8.3 Alarm mode

Select the Alarms mode in options and approve the choice by pressing

Fig.16. Alarm mode screens
Table 2

| No. |  | Parameter name | range | Notes / description | Default value |

| 12 |  |  |  |  |
| 13 | Delay condition off | $0 \ldots 3600$ | Delay of condition deactivation <br> in seconds | 0 |
|  | Hidbk cond. off->on | $0 \ldots 3600$ | Locking the condition <br> reactivation in seconds | 0 |
| Display cond. event | On/off | Signaling of condition occurrence <br> When the function of maintaining is <br> switched on, after the state of <br> condition is finished, the condition <br> symbol is not blanked, but it begins <br> to flash. <br> The signaling lasts until pressing the <br> buttons $\Delta$ |  |  |

When the entered "Upper condition value " is lower than the "Lower condition value ", the condition is disabled.

Fig.17. Types of conditions: a) $n \_o n$
b) noFF
c) on
d) OFF

Other types of conditions:

- H_on - always met;
- HoFF - always not met,
- 3non - when the value of the measured quantity exceeds the "Upper value of condition" at any phase - the condition will be met. The condition is disabled when the value of the measured value at all phases is less than the "Lower value of the condition."
- 3noF - when the value of the measured quantity is lower than the "Lower value of condition" at any phase - the condition will be met. The condition is disabled when the value of the measured value at all phases is higher than the "Upper value of the condition."
- 3_on - when the value of the measured quantity at any phase will be between the "Lower value of condition," and "Upper value of condition" - the condition is met. The condition will be disabled if the value of the measured quantity is below the "Lower value of condition" or above the
"Upper value of the condition" at all phases.
- 3_oF - when the value of the measured quantity will be below the "Lower value of condition" or above the "Upper value of condition" at any phase - the condition is met. The condition will be disabled if the value of the measured quantity is between the "Lower value of condition" and the "Upper value of the condition" at all phases.
- In the 3rd series of alarms the alarm value must come from the following ranges: 01-09, 10-18 and 19-27 (acc. to table 7). They work with the same Hysteresis thresholds of the "Lower values of condition" and "Upper value of condition" for each phase. The blanking of alarm signaling occurs after simultaneous pressing of the buttons $\boldsymbol{\square}$

### 8.4 Display mode

In this mode, we configure the pages displayed in the normal operation mode of the meter Measurement,

Fig.18. Ethernet mode screens

### 8.5 Archiving mode

Select the Archiving mode in options and confirm the choice by pressing
 select the parameter feature or the desired parameter values are set. The active position is indicated by the cursor . The selected characteristic or value of the parameter should be confirmed by pressing the button or canceled by simultaneous pressing The choice of parameters (archived quantities) is made in the menu:
Archiving \Group1 \Parameters by selecting or deselecting the archived size by briefly pressing .Acceptance of selected archived quantities is done by pressing $\quad$ for at least 3 seconds. The same applies to the selection of parameters (archived quantities) for Group2.

To exit Archiving procedure, press again or after waiting for approx. 120 seconds. Exit the Parameters selection menu after pressing the button again

Fig.20. Types of archiving: a) n_on b) noFF $\quad$ c) on $\quad$ d) oFF
Other archiving types:

- H_on - always enabled;
- HoFF - always disabled,
- 3non - when the condition n_on type is met at any phase - archiving is enabled. It will be disabled only when all trigger conditions disappear.
- 3noF - when the condition noFF type is met at any phase - archiving is enabled. It will be disabled only when all trigger conditions disappear.
- 3_on - when the condition on type is met at any phase - archiving is enabled. It will be disabled only when all trigger conditions disappear.
- 3_oF - when the condition oFF type is met at any phase - archiving is enabled. It will be disabled only when all trigger conditions disappear.
- In the series 3 archiving the triggering quantity must come from the following range: 01-09 (according to table 7). Archiving works with the same hysteresis thresholds Ar_L and Ar_H for each phase.

Selection of quantities at alarm and archived outputs:

## 9 EXTENDED FUNCTIONALITY

In the NR30 meter (for additional payment) you can activate additional functionality. This is done by entering, from the meter menu level (Information $\rightarrow$ Service code), the correct code received from the manufacturer. A detailed description of the additional functions and their activation can be found in the appropriate manuals on the manufacturer's website.

## 10 MEASURED VALUES ARCHI VI NG

### 10.1 I NTERNAL MEMORY

NR30 meters are equipped with 4MB internal memory and 8GB file archive memory designed for storing data recorded by the meter. The 4MB internal memory allows for storage of 40960 records. The memory is a circular buffer.

### 10.2 COPYI NG THE ARCHIVE

Once the 4 MB internal memory is full in $70 \%$ or forced at any time: in the Archiving mode, select Actions and set the "Copy archive to CSV file" parameter to "Yes". The recorded data will be copied to the file archive. Starting the copying procedure to the archive can also be done via the RS485 interface (register 4125)
Example: file archive with an archiving period of 5 sec. allows you for recording for about 2 years. The status of the file archive usage can be checked in Status 3 (see: Status register 3 (address 7561).

When the file archive is full to $95 \%$, the overwrite mode is started, in which during further archiving and creating new archive files, the oldest archived files are deleted.

When the file archive is full (less than 14 days to fill the file archive at 1 second intervals), the $F$ flag starts flashing along with the percentage of the file archive usage.
When copying internal memory, the NR30 meter creates catalogs and files in the file archive. An example of the directory structure is shown in Fig. 25.

Fig.25. Directory structure in the file archive
Data in the archives are stored in files placed in directories (year, month of archive copy). File names are marked as the day and time of copying the first record and have the format ddhhmmss.csv, where: dd-day, hh-hour, mm -minute, ss-second.

### 10.3 STRUCTURE OF ARCHIVE FI LES

Files containing archived data have the structure of columns, where subsequent columns of data are separated by a comma. The first line of the file contains the column header. Data records are arranged in rows in succession. The view of the sample file is shown in Figure 26.

Fig.26. Sample archive file with data
Subsequent fields included in the row describing the record have the following meaning:

- date - the date of the data registration, the date separator character is "-"
- time - hour, minute, second of recorded data, the time separator is ":"
- record index - the unique index of the record. Each record has its own individual number.

This number increases when more records are recorded.

- block - reserved,
- register1 - Modbus register address of the first archived value,
- name1 - description of the Modbus register of the first archived value,
- value1 - the first archived value. The decimal separator is ".", The values are saved in the engineering format.
- :
- register16 - Modbus register address of the sixteenth archived value,
- name16 - Modbus register description of the sixteenth archived value,
- value16 - the sixteenth archived value. The decimal separator is ".", The values are saved in the engineering format.
name1, ...,name16 - description in accordance with table 8 (Displayed parameter).

### 10.4 DOWNLOADI NG THE ARCHIVE

Archived data can be downloaded via Ethernet using the FTP protocol.

## 11 SERIAL I NTERFACES

### 11.1 RS485 I NTERFACE - the list of parameters

The implemented protocol is in accordance with the PI-MBUS-300 Rev G of Modicon Company. The list of serial link parameters of NR30 meter:

- ID
- meter address
- baud rate
- operation mode
- information unit

0xE6
1..247,
4.8, 9.6, 19.2, 38.4, 57.6, $115.2 \mathrm{kbit} / \mathrm{s}$,

Modbus RTU,
8N2, 8E1, 8O1, 8N1,

- maximum time to commence the response 600 ms ,
- maximum number of read registers in one query
- 61 registers -4 byte,
- 122 registers - 2 byte,
- implemented functions
-03, 04, 06, 16, 17,
- 03, 04 registers reading,
- 06 one register record
- 16 n - registers record,
- 17 device identification

Default settings: address 1, baud rate 9.6 kbit/s, RTU 8N2 mode,

### 11.2 Examples of registers reading and saving

## Readout of n-registers (code 03h)

Example 1. Readout of 2 16-bit registers of integer type, starting with the register addressed 0FAOh (4000) - registers values 10, 100.

Request:

| Device address | Function | Register address |  | Number of registers |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B1 | B0 | B1 | B0 |  |
| 01 | 03 | OF | A0 | 00 | 02 | C7 3D |

## Response:

| Device address | Function | Number of bytes | Value from the registerOFAO (4000) |  | Value from register 0FA1 (4001) |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | B1 | B0 | B1 | B0 |  |
| 01 | 03 | 04 | 00 | OA | 00 | 64 | E4 6F |

Example 2. Readout of 2 32-bit registers of float type as a combination of 2 16-bit registers starting with the register addressed 1B58h (7000) - registers values 10, 100.

Request:

| Device <br> address | Function | Register address |  | Number of registers |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B1 | B0 | B1 | B0 |  |
| 01 | 03 | 1B | 58 | 00 | 04 | C3 3E |

Response:

| Device address | Function | Number of bytes | Value from the register 1B58 (7000) |  | Value from the register 1B59 (7001) |  | Value from the register 1B5A (7002) |  | Value from the register 1B5B (7003) |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | B3 | B2 | B1 | B0 | B3 | B2 | B1 | B0 |  |
| 01 | 03 | 08 | 41 | 20 | 00 | 00 | 42 | C8 | 00 | 00 | E4 6F |

Example 3 . Readout of 2 32-bit registers of float type as a combination of 2 16-bit registers starting with the register addressed 1770h (6000) - registers values 10, 100.

Request:

NR30-09D User's manual

| Device <br> address | Function | Register address |  | Number of registers |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B 1 | B0 | B1 | B0 |  |
| 01 | 03 | 17 | 70 | 00 | 04 | 4066 |

Response:

| Device address | Function | Number of bytes | Value from the register 1770h(6000) |  | Value from the register 1770h(6000) |  | Value from the register 1772h(6002) |  | Value from the register 1772h(6002) |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | B1 | B0 | B3 | B2 | B1 | B0 | B3 | B2 |  |
| 01 | 03 | 08 | 00 | 00 | 41 | 20 | 00 | 00 | 42 | C8 | E4 6F |

Example 4. Readout of 2 32-bit registers of float type, starting with the register addressed 1D4Ch (7500)

- register values $10,100$.

Request:

| Device <br> address | Function | Register address |  | Number of registers |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B1 | B0 | B1 | B0 |  |
| 01 | 03 | 1D | 4C | 00 | 02 | 03 B0 |

Response:

| Device address | Function | Number of bytes | Value from the register1D4C (7500) |  |  |  | Value from register 1D4D (7501) |  |  |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | B3 | B2 | B1 | B0 | B3 | B2 | B1 | B0 |  |
| 01 | 03 | 08 | 41 | 20 | 00 | 00 | 42 | C8 | 00 | 00 | E4 6F |

## Readout of single register (code 06h)

Example 5. Record of 543 ( $0 \times 021 \mathrm{~F}$ ) value to register 4000 ( $0 \times 0 \mathrm{FAO}$ )
Request:

| Device <br> address | Function | Register address |  |  | Register value |  |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B 1 | B 0 | B 1 | B 0 |  |  |  |
| 01 | 06 | OF | A0 | 02 | 1 F | CA 54 |  |  |

Response:

| Device <br> address | Function | Register address |  | Register value |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B 1 | B 0 | B 1 | B 0 |  |
| 01 | 06 | OF | A 0 | 02 | 1 F | CA 54 |

## Saving to n -registers (code 10h)

Example 6. Readout of 2 registers, starting with the register addressed 0FA3h (4003)
Recording values 20, 2000.
Request:

| Device address | Function | Address of reg. Hi | $\begin{gathered} \text { Address } \\ \text { of } \\ \text { reg.Lo } \end{gathered}$ | $\begin{aligned} & \text { No. of } \\ & \text { reg. } \mathrm{Hi} \end{aligned}$ | $\begin{aligned} & \text { No. of } \\ & \text { reg. Lo } \end{aligned}$ | Number of bytes | $\begin{aligned} & \text { Value for reg. OFA3 } \\ & (4003) \end{aligned}$ |  | $\begin{gathered} \text { Value for reg. OFA4 } \\ (4004) \\ \hline \end{gathered}$ |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  | B1 | B0 | B1 | B0 |  |
| 01 | 10 | OF | A3 | 00 | 02 | 04 | 00 | 14 | 07 | D0 | BB 9A |

Response:

| Device <br> address | Function | Register address |  | Number of registers |  | Checksum CRC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B1 | B0 | B1 | B0 |  |
| 01 | 10 | OF | A3 | 00 | 02 | B2 FE |

## Report identifying the device (code 11h)

Example 7. Device identification
Request:

| Device address | Function | Checksum |
| :---: | :---: | :---: |
| 01 | 11 | C0 2C |

Response:

| $\begin{array}{\|c} \hline \text { Addres } \\ \mathrm{s} \end{array}$ | Function | Numbe $r$ of bytes | ID | Device state | Information field for device software version (e.g. "NR30-0.80 - NR30 device with software version 0.80) |  | Checksu m (CRC) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | NR30-0.80 |  |  |
| 01 | 11 | 19 | E6 | FF | 4E 523330 2D 30 2E 3830 | $\begin{gathered} 202020202020202020 \\ 2020202020 \end{gathered}$ |  |

### 11.3 Ethernet 10/ 100-BASE-T

NR30 meters are equipped with Ethernet interface that allows for connection of the meter (using RJ45 socket) to a local or global network (LAN or WAN). Ethernet interface allows to use network services implemented in the meter: WWW server, FTP server, Modbus TCP/IP. To use the network services of the meter, you need to configure the parameters from the meter Ethernet group. Standard Ethernet
parameters of the meter are shown in table 8. The basic parameter is the IP address of the meter - e.g. by default 10.0.1.161, which must be unique within the network to which we connect the device. The IP address can be assigned to the meter automatically by DHCP server present on the network provided that the option to acquire IP address from DHCP server is enabled in the meter. Ethernet $\rightarrow$ Addresses $\rightarrow$ DHCP $\rightarrow$ Enabled. If DHCP service is disabled then the meter will work with the default IP address allowing the user to change the IP address, e.g. from the meter menu. The Ethernet parameters of the meter can also be changed via the serial interface. Then the approval of changes is required by entering value " 1 " to the register 4149. After the changes are applied, the Ethernet interface is re-initialized according to the new parameters - all Ethernet interface services will be restarted.

### 11.3.1 Connection of 10/ 100 BASE-T interface

To access the Ethernet services, it is required to connect the meter to the network via the RJ45 slot located at the rear/ inside the panel part of the meter, operating in accordance with TCP/IP protocol.

Description of RJ45 socket LEDs function:

- yellow LED - illuminates when the meter is properly connected to the Ethernet network

100 Base-T, does not light up when the meter is not connected to the network or is connected to 10-Base-T network.

- green LED - Tx/Rx illuminates when the meter sends and receives data, flickers irregularly, when no data is transmitted the LED lights up permanently

In order to connect the meter to the network the user should use twisted pair cable.

- U/FTP - twisted pair cable with each pair foiled,
- F/FTP - twisted pair cable with each pair foiled, additionally cable with foil shield,
- S/FTP (formerly SFTP) - twisted pair cable with each pair foiled, additionally cable with wire mesh shield,
- SF/FTP (formerly S-STP) - twisted pair cable with each pair foiled, additionally with foil and wire mesh shield,

Categories of twisted pair cable according to the European standard EN 50173 minimum: Class D (category 5) - for high-speed local area networks, includes applications using the frequency band up to 100 MHz . For Ethernet interface the user should use twisted pair cable of STP type (shielded) category 5 with RJ-45 connector with conductors colors (in accordance with the colors described in table 11) acc. to the following standard:

- EIA/TIA 568A for both connectors at the so-called simple connection of NR30 to the network hub or switch,
- EIA/TIA 568A for the first connector and EIA/TIA 568B for the second connector at the so-called patch cord connection (crossover) used, among others, when connecting NR30 to the computer.

Table 12

| Conductor no. | Signal | Conductor color acc. to standard |  |
| :---: | :---: | :---: | :---: |
|  |  | EIA/TIA 568A | EIA/TIA 568B |
| 1 | TX+ | white-green | white-orange |
| 2 | TX- | green | orange |
| 3 | RX+ | white-orange | white-green |
| 4 | EPWR+ | blue | blue |
| 5 | EPWR+ | white-blue | white-blue |
| 6 | RX- | orange | green |
| 7 | EPWR- | white-brown | white-brown |
| 8 | EPWR- | brown | brown |

Fig. 27 View and numbering of RJ45 slot pins

### 11.3.2 Web server

NR30 meter provides its own Web server that allows remote monitoring of measured values and readout of the meter status. With the web page the user can:

- obtain device information (serial number, execution code, firmware version, bootloader version, variant (standard or special),
- preview of the current measurement values, readout of the device status,
- select the language for the Web page,

Access to the Web server is achieved by entering the meter IP address in the web browser, e.g.: http://192.168.1.030 (where 192.168.1.030 is the set address of the meter). The standard port for web server is port " 80 ". Server port may be changed by the user.

Caution: For proper web page operation a browser with JavaScript enabled and compatible with XHTML 1.0 is required (all popular browsers, Internet Explorer, version 8 minimum).

### 11.3.2.1 General view

Miernik parametrów sieci 3 -fazowej typ NR30

Fig.28. View of the meter WWW page

### 11.3.2.2 Selection of Web server user

The meter has two user accounts for the WWW server secured by individual passwords:

- user: "admin", password: "admin" - access to configuration and the preview of parameters
- user: "user", password: "pass" - access to the preview of parameters only.

Calling the meter IP address in the browser, for example http://192.168.1.30 will show the start window in the browser where the user must enter the name and password.

Fig.29. View of the meter WWW server log window
Web server user names cannot be changed. However, it is possible to change the password for each user - it is recommended to change passwords for security reasons. Password change is only possible through the web page in "Ethernet" parameters group. Passwords can have a maximum of 8 characters. If the password is lost - which will prevent you from using the web server, you must restore the Ethernet interface parameters e.g. from the menu: Settings $\rightarrow$ Factory settings $\rightarrow$ Yes, or by entering the value of "1" in register 4152. All standard parameters of the meter including the Ethernet parameters (according to Table 9) and user passwords for WWW server will be restored:
user "admin" $\rightarrow$ password: "admin";
user "user" $\rightarrow$ password "pass".

### 11.3.3 FTP server

FTP file sharing protocol is implemented in NR30 meters. The meter acts as a server, allowing clients to access the internal memory of the meter file system. Access to files is possible using a computer, tablet with installed FTP client or another device acting as FTP client. To transfer files using FTP the following ports are normally used: "1025" - data port and "21" - command port. If necessary, the user can change the port used by the FTP. Please note, that the configuration of the server and FTP client ports must be the same.

FTP client program can work in passive mode. In passive mode the connection is established fully by the client (the client chooses the data port). For file transfer with the meter it is possible to use maximum one connection at the same time, that is why the maximum number of connections must be limited to "1" in the client program.

### 11.3.3.1 Selection of FTP user

The meter has two user accounts for the FTP server secured by individual passwords:

- user: "admin", password: "admin" - access to files saving and reading
- user: "user", password: "passftp" - access to archive files reading only.

FTP user names cannot be changed, however it is possible to change the password for each user - it is recommended to change passwords for security reasons. Password change is only possible through the web page in "Ethernet" parameters group. Passwords can have a maximum of 8 characters. If the
password is lost - which will prevent you from using the FTP server, you must restore the Ethernet interface default parameters e.g. from the menu: Settings $\rightarrow$ Factory settings $\rightarrow$ Yes, or by entering the value of "1" in register 4152. All standard parameters of the meter including the Ethernet parameters (according to Table 9) and user passwords for FTP server will be restored:
user "admin" $\rightarrow$ password: "admin";
user "user" $\rightarrow$ password "passftp".
FileZilla can be used as the FTP client. By typing the meter IP address in the address field we can view

and download archive files.
Fig.30. View of FTP session called in FileZilla program

### 11.3.4 Modbus TCP/ IP

NR30 meter allows access to internal registers via Ethernet and Modbus TCP/IP. In order to set up a connection it is necessary to set a unique IP address for the meter and to set the connection parameters listed in Table 13.

Table 13

| Register | Description | Default value |
| :--- | :--- | :---: |
| 4146 | Device address for Modbus TCP/IP | 1 |

| 4147 | Port number of Modbus TCP | 502 |
| :--- | :--- | :---: |
| 4145 | Time to close the port of Modbus TCP/IP service [s] | 60 |
| 4144 | The maximum number of simultaneous connections to Modbus TCP/IP <br> service | 4 |

The device address is the device address for Modbus TCP/IP protocol and is not the same as the address value for Modbus RS485 protocol (address in Modbus network register 4100). By setting the "Device Address for Modbus TCP/IP Protocol" parameter to " 255 ", the meter will skip the address analysis in the Modbus protocol frame (broadcast mode).

## 12 MAP OF REGISTERS OF NR30 METER

In NR30 meter the data is placed in 16 - and 32-bit registers. Process variables and parameters of the meter are located in the address space of registers in a manner dependent on the type of the variable. Bits in 16-bit register are numbered from the youngest to the oldest (b0-b15). 32-bit registers contain floating point numbers in IEEE-754 standard. Byte order 3210 - the oldest is sent first.

Table
14

| Address range | Value type | Description |
| :---: | :---: | :---: |
| 4000-4159 | Integer (16 bits) | Value placed in one 16 -bit register. Registers for meter configuration. Description of registers can be found in table 16. Registers for recording and reading. |
| 4200-4260 | Integer (16 bits) | Value placed in one 16-bit register. Registers for configuration of programmable read-only register group Description of registers can be found in table 15. Registers for recording and reading. |
| 4300-4388 | $\begin{aligned} & \text { Integer } \\ & \text { (16 bits) } \end{aligned}$ | Value placed in one 16-bit register. Registers for configuration of displayed pages, Description of registers can be found in table 19. Registers for recording and reading. |
| 4400-4485 | Integer (16 bits) | Value placed in one 16-bit register. Registers of status, energy values, the meter MAC address, configuration data. Description of registers can be found in table 20. Read-only registers. |
| 6000-6970 | Float ( $2 \times 16$ bits) | Values placed in two successive 16 -bit registers. Registers contain the same data as 32 -bit registers of $7500-7953$ range. Read-only registers. Byres order (1-0-3-2) |
| 7000-7118 | $\begin{gathered} \text { Float } \\ (2 \times 16 \text { bits }) \end{gathered}$ | Content of registers set in registers 4200-4359. Byres order (3-2-1-0) |
| 7200-7318 | $\begin{gathered} \text { Float } \\ (2 \times 16 \text { bits }) \\ \hline \end{gathered}$ | Content of registers set in registers 4200-4359. Byres order (1-0-3-2) |
| 7400-7459 | $\begin{gathered} \text { Float } \\ (32 \text { bits }) \end{gathered}$ | Content of registers set in registers 4200-4359. Values placed in single 32bit register. |
| 7500-7985 | $\begin{gathered} \text { Float } \\ (32 \text { bits }) \end{gathered}$ | Values placed in a single 32-bit register. Description of registers can be found in table 21. Read-only registers. |
| 8000-8970 | $\begin{gathered} \text { Float } \\ (2 \times 16 \text { bits }) \end{gathered}$ | Values placed in two successive 16 -bit registers. Registers contain the same data as 32 -bit registers of $7500-7953$ range. Read-only registers. Byres order (3-2-1-0) |
| 9000-9144 | $\begin{gathered} \text { Float } \\ (2 \times 16 \text { bits }) \end{gathered}$ | Value is set in the two following 16-bit registers Description of registers is shown in Table 22. Readout registers. Bytes sequence ( $1-0-3-2$ ) |
| 9200-9344 | $\begin{gathered} \text { Float } \\ (2 \times 16 \text { bits }) \end{gathered}$ | Value is set in the two following 16 -bit registers.Description of registers is shown in Table 22. Readout registers. Bytes sequence (3-2-1-0) |

Table 15

| Register address | Operations | Range | Description | Default |
| :---: | :---: | :---: | :---: | :---: |
| 4000 | RW | 0...9999 | Protection - password | 0 |
| 4001 | RW | 0 .. 1 | Connections layout <br> 0-3Ph/4W <br> 1-3Ph/3W <br> 2-1Ph/2W | 0 |
| 4002 | RW | 0 .. 2 | Voltage at terminal 2: <br> 0 - voltage of the first phase L1 <br> 1 - voltage of the second phase L2 <br> 2 - voltage of the third phase L3 | 0 |
| 4003 | RW | 0 .. 2 | Voltage at terminal 5: <br> 0 - voltage of the first phase L1 1 - voltage of the second phase L2 2 - voltage of the third phase L3 | 1 |
| 4004 | RW | 0 .. 2 | Voltage at terminal 8: <br> 0 - voltage of the first phase L1 <br> 1 - voltage of the second phase L2 <br> 2 - voltage of the third phase L3 | 2 |
| 4005 | RW | $0 . .5$ | Current at terminals 1,3: <br> 0 - current of the first phase $\mathrm{L}_{\mathrm{L} 1}$ <br> 1 - reversed current direction of phase L1: - L 1 <br> 2 - current of the second phase $\mathrm{L}_{\mathrm{L} 2}$ <br> 3 - reversed current direction of phase L2: - L 2 <br> 4 - current of the third phase IL3 <br> 5 - reversed current direction of phase L3: - L 3 | 0 |
| 4006 | RW | $0 . .5$ | Current at terminals 4,6: <br> 0 - current of the first phase $\mathrm{L}_{\mathrm{L} 1}$ <br> 1 - reversed current direction of phase L1: - L 1 <br> 2 - current of the second phase $\mathrm{I}_{\mathrm{L} 2}$ <br> 3 - reversed current direction of phase L2: - - L2 <br> 4 - current of the third phase $\mathrm{I}_{\mathrm{L} 3}$ <br> 5 - reversed current direction of phase L3: - L L3 | 2 |
| 4007 | RW | $0 . .5$ | Current at terminals 7,9 : <br> 0 - current of the first phase $\mathrm{L}_{\mathrm{L} 1}$ <br> 1 - reversed current direction of phase L1: - L 1 <br> 2 - current of the second phase $L_{L 2}$ <br> 3 - reversed current direction of phase L2: - L 2 <br> 4 - current of the third phase $\mathrm{I}_{\mathrm{L} 3}$ <br> 5 - reversed current direction of phase L3: - L L3 | 4 |
| 4008 | RW | 0,1 | Current input range: 1 A or $5 \mathrm{~A}: 0-1 \mathrm{~A}, 1-5 \mathrm{~A}$ or 63 A depending on the version | 1 |
| 4009 | RW |  | Reserved |  |
| 4010 | RW | $0 . .18$ | Primary voltage of transformer, two older bytes | 0 |
| 4011 | RW | $0 . .65535$ | Primary voltage of transformer, two younger bytes | 100 |
| 4012 | RW | 1 .. 10000 | Secondary voltage of transformer $\times 10$ | 1000 |
| 4013 | RW | 1 .. 20000 | Primary current of transformer | 5 |
| 4014 | RW | 1.. 1000 | Secondary current of transformer | 5 |
| 4015 | RW | 0... 2 | Active power averaging time $P$ Demand, apparent power $S$ Demand, current I Demand $0-15,1-30,2-60$ minutes | 0 |
| 4016 | RW | 0.1 | Synchronization with real time clock 0 - no synchronization <br> 1 - synchronization with the clock | 1 |
| 4017 | RW |  | Reserved |  |
| 4018 | RW | $\begin{gathered} 577 \text {.. } 1000 \mathrm{~V} \\ \text { or } \\ 2300 \text {.. } 4000 \mathrm{~V} \end{gathered}$ | Phase input voltage $\times 10$ | $\begin{aligned} & 577 \text { or } \\ & 2300 \end{aligned}$ |

| 4019 | RW | $\begin{gathered} 1000 \text {.. } 1700 \mathrm{~V} \\ \text { or } \\ 4000 \text {.. } 6900 \mathrm{~V} \end{gathered}$ | Phase-to-phase input voltage $\times 10$ | $\begin{aligned} & 1000 \text { or } \\ & 4000 \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| 4020 | RW |  | Reserved |  |
| 4021 | RW |  | Reserved |  |
| 4022 | RW |  | Reserved |  |
| 4023 | RW |  | Reserved |  |
| 4024 | RW | 0... 4 | Resetting energy meters: <br> 0 - no changes, 1- reset active energies, 2 - erase reactive energies, 3 - erase apparent energies, 4 erase all energies | 0 |
| 4025 | RW | 0.1 | Resetting averaged parameters P Demand, S Demand, I Demand | 0 |
| 4026 | RW | 0.1 | Resetting min, max | 0 |
| 4027 | RW | 0.1 | Resetting alarm signaling maintenance | 0 |
| 4028 | RW |  | Reserved |  |
| 4029 | RW |  | Reserved |  |
| 4030 | RW | 0... 4 | Alarm output 1- logic actions of conditions 1, 2, 3 $\begin{gathered} 0-C 1 \\ 1-C 1 \vee C 2 \vee C 3 \\ 2-C 1 \wedge C 2 \wedge C 3 \\ 3-(C 1 \wedge C 2) \vee C 3 \\ 4-(C 1 \vee C 2 \wedge C 3 \end{gathered}$ | 0 |
| 4031 | RW | 0,1 | Alarm output 1 - state of relay at alarm occurrence: 0 - relay off 1 - relay on | 1 |
| 4032 | RW | 0,1 | Alarm output 1- lock of alarm deactivation | 0 |
| 4033 | RW | 0,1 | Alarm output 1 - signaling of alarm occurrence | 0 |
| 4034 | RW | 0.1.. 52 | Alarm output 1 - quantity for condition 1 (c1) (code acc. to table 8) | 38 |

| 4480 | R | $0 . .152$ | Active exported 3-phase energy for the current 48 hours, two older bytes | 0 |
| 4481 | R | 0..65535 | Active exported 3-phase energy for the current 48 hours, two younger bytes | 0 |

NR30-09D User's manual 52

| 4482 | R | $0 . .152$ | Active imported 3-phase energy for the current 24 hours, <br> two older bytes | 0 |
| :---: | :---: | :---: | :---: | :---: |
| 4483 | R | $0 . .65535$ | Active imported 3-phase energy for the current 24 hours, <br> two younger bytes | 0 |
| 4484 | R | $0 . .152$ | Active exported 3-phase energy for the current 24 hours, <br> two older bytes | 0 |
| 4485 | R | $0 . .65535$ | Active exported 3-phase energy for the current 24 hours, <br> two younger bytes | 0 |

Energy is made available in hundreds of watt-hours (var-hours) in double 16-bit register, and for this reason, they must be divided by 100 when calculating values of particular energy from registers, i.e.:

Imported active energy $=($ register 4426 value $\times 65536+$ register 4427 value) $/ 100[\mathrm{kWh}]$
Exported active energy $=$ (register 4428 value $\times 65536+$ register 4429 value) $/ 100[\mathrm{kWh}]$
Reactive inductive energy $=$ (register 4430 value $\times 65536+$ register 4431 value) $/ 100$ [kVarh]
Reactive capacitive energy $=$ (register 4432 value $\times 65536+$ register 4433 value) $/ 100$ [kVarh]
Apparent energy $=($ register 4434 value x $65536+$ register 4435 ) value / 100 [kVAh]
Similarly, energy from registers 4462 to 4485 should be converted.

## Device status register 1 (address 4415, R):

Bit 15 -"1" - FRAM memory corruption
Bit 14-"1" - no input calibration
Bit13-Reserved
Bit 12 - reserved
Bit 11 - "1" - error in configuration registers
Bit 10 - "1" - error in displayed pages registers
Bit 9 - "1" - error in configuration registers of programmable read-only register group Bit 8 - "1" - error of energy values

## Status register 2 (address 4416, R):

Bit 15 - " 1 " - signaling of condition 3 occurrence for alarm 2
Bit 14 - " 1 " - signaling of condition 2 occurrence for alarm 2
Bit 13 - " 1 " - signaling of condition 1 occurrence for alarm 2
Bit 12-"1" - signaling of alarm 2 occurrence
Bit 11-" 1 " - alarm 2 condition 3 active
Bit 10-" 1 " - alarm 2 condition 2 active
Bit 9 - "1" - alarm 2 condition 1 active
Bit 8 - "1" - alarm 2 active

Bit 7 - "1" - error of phase sequence
Bit 6 - "1" - error in MQTT registries
Bit 5 - "1" - error in the supervisory relay registers
Bit 4 - reserved
Bit 3 - reserved
Bit 2 - „1" - presence of Ethernet and internal memory
Bit 1 - "1" - used battery of RTC
Bit 0 - reserved

Bit 7-"1" - signaling of condition 3 occurrence for alarm 1
Bit 6 - " 1 " - signaling of condition 2 occurrence for alarm 1
Bit 5-"1" - signaling of condition 1 occurrence for alarm 1
Bit 4-"1" - signaling of alarm 1 occurrence
Bit 3-"1" - alarm 1 condition 3 active
Bit 2 - " 1 " - alarm 1 condition 2 active
Bit 1-"1" - alarm 1 condition 1 active
Bit 0 - "1" - alarm 1 active

## Status register 3 (address 4417, R): File archive status

Bit 15 - Ethernet connected
Bit 14 - reserved
Bit 13 - reserved
Bit 12 - reserved
Bit 11 -"0"- waiting until archiving conditions are met, " 1 " - archiving in 2-nd archiving group,
Bit 10 -"0"- waiting until archiving conditions are met, "1" - archiving in 1-st archiving group,
Bit 9 - reserved
Bit 8 - Archiving group 2 enabled

Bit 7 - Archiving group 1 enabled
Bit 6 - reserved
Bit 5 - copying internal memory to file archive from 2nd archiving group
Bit 4 - copying internal memory to file archive from 1st archiving group
Bit 3 - File archive full, ( less than 14 days to complete archive filling at 1 sec . interval )
Bit 2 - File archive used in 70\%
Bit 1 - File archive properly initiated
Bit 0 - Error of file archive system

Status register 4 (address 4418, R) type of reactive power :

Bit 15 - reserved
Bit 14 - "1" - Demand- capacity 3L max.
Bit 13 - "1" - Demand- capacity 3L min.
Bit 12 - "1" - Demand- capacity 3L
Bit 11 - "1" - capacitive 3L maximum
Bit 10 - "1" - capacitive 3L minimum
Bit 9 - "1" - capacitive 3L
Bit 8 - "1" - capacitive L3 maximum

Bit 7 - "1" - capacitive L3 minimum
Bit 6 - "1" - capacitive L3
Bit 5 - "1" - capacitive L2 maximum
Bit 4 - "1" - capacitive L2 minimum
Bit 3 - "1" - capacitive L2
Bit 2 - "1" - capacitive L1 maximum
Bit 1 - "1" - capacitive L1 minimum
Bit 0 - "1" - capacitive L1

## Status register 5 (address 4419, R):

Bit 8 - "1" - alarm 1, condition 3 for L3 phase active Bit 7 - "1" - alarm 1, condition 3 for L2 phase active Bit 6 - "1" - alarm 1, condition 3 for L1 phase active Bit 5 - "1" - alarm 1, condition 2 for L3 phase active Bit 4 - "1" - alarm 1, condition 2 for L2 phase active Bit 3 - "1" - alarm 1, condition 2 for L1 phase active Bit 2 - "1" - alarm 1, condition 1 for L3 phase active Bit 1 - "1" - alarm 1, condition 1 for L2 phase active Bit 0 - "1" - alarm 1, condition 1 for L1 phase active

## Status register 6 (address 4420, R):

Bit 8 - "1" - alarm 2, condition 3 for L3 phase active Bit 7 - "1" - alarm 2, condition 3 for L2 phase active Bit 6 - "1" - alarm 2, condition 3 for L1 phase active Bit 5 - "1" - alarm 2, condition 2 for L3 phase active Bit 4 - "1" - alarm 2, condition 2 for L2 phase active Bit 3 - "1" - alarm 2, condition 2 for L1 phase active Bit 2 - "1" - alarm 2, condition 1 for L3 phase active Bit 1 - "1" - alarm 2, condition 1 for L2 phase active Bit 0 - "1" - alarm 2, condition 1 for L1 phase active

## Status register 7 (address 4424, R)

Bit 8 - reserved
Bit 7 - reserved
Bit 6 - reserved
Bit 5 - reserved
Bit 4 - reserved
Bit 3 - reserved
Bit 2 - reserved
Bit 1 - "1" - functions of MQTT protocol enabled
Bit 0 - "1" - functions of supervisory relay enabled

## 13 FIRMWARE UPGRADE

### 13.1 Update of the meter website

The website can be updated via the FTP server.
We update the website of the meter in the Website update tab. Copy the file NR30_upd.tar to the main folder of the meter. Then turn the meter off and on, i.e. reset the meter. The NR30_upd.tar file will be unpacked to the correct folders. It can take about 1 minute. The meter screen will display messages informing about the progress of the unpacking process.

Fig.31. Window view - website update file

### 13.2 Firmware upgrade - the main program of the meter

NR30 meters have a feature that allows the user to upgrade the software using a PC with eCon software. Free eCon software and update files are available at www.lumel.com.pl. Upgrade of the meter software (firmware) can be done via the RS485 interface. The update is done in LUMEL UPDATER tab.
a)

b)

Fig.32. View of program window: a) eCon, b) firmware upgrade
Caution! After upgrading the software, the user should set the factory settings of the meter, thus it is recommended to preserve the initial meter parameters before the upgrade with the use of eCon software.
After starting eCon the serial port, speed, mode and meter address should be set in the settings. Then select NR30 meter and click Configure To read all the settings, click the down arrow, then the floppy icon to save the settings to a file (to restore them later). After selecting Update firmware (in the upper right corner of the screen) Lumel Updater (LU) window will open - Fig. 3 2.b. Press Connect. Messages information window contains info about the progress of the upgrade process. When the port is properly opened the display shows: Port opened. There are two ways to enter the upgrade mode: remotely through the LU (based on settings in eCon - address, mode, speed, COM port) and by turning on the meter power with the button pushed (when entering the bootloader mode with the button, communication parameters: speed 9600, RTU8N2, address 1). The display will show boot with bootloader version, and LU program will show the message Device found and the name and program version of the connected device. Press the ,..." button and select the meter update file. When the file is properly opened File opened message is displayed. Press the Send button. After successful upgrade the meter switches to normal operation, and the information window shows Done and the upgrade duration. After closing the LU window, go to Service Parameters, select Set Meter Defaults and press the Restore button. Then press the folder icon to open the previously saved settings file and press the up arrow to save the settings in the meter. The current software version can also be checked by reading the greeting messages of the meter after powering up.
Caution! Turning off the power during the software upgrade may result in permanent damage to the meter!

## 14 ERROR CODES

During operation of the meter, error messages may appear on the display. The causes of the errors are listed below.

## Error:

MEM_FR, CAL_IN, SDCARD - displayed when the memory of the meter is corrupted. The meter must be sent to the manufacturer.
P.CFG - displayed when the operating parameters of the meter are incorrect. The factory settings must be restored (from the menu "Settings -> Set all defaults" or via RS485).
P.PAGE - displayed when the parameters related to the configuration of displayed parameters in the meter are incorrect. The factory settings should be restored (from the menu " Displaying -> Settings -> Set page defaults "or via RS485).
P.READ - displayed when the parameters related to registers from the modbus $42 x x$ group of addresses are incorrect. The factory settings must be restored (from the menu " Modbus -> Set defaults $42 x x$ " or via RS485).
ENERGY - displayed when an error occurs in the value in one of the energy counters of the meter. The factory settings must be restored (from the menu " Parameters -> Del energy counters" or via RS485).

- ^ヘヘ^- upper exceeding. The value is measured outside the measurement range.
$-\mathrm{VVVV}-$ lower exceeding. The value is measured outside the measurement range.

## 15 TECHNICAL DATA

Measurement ranges and acceptable errors
Table 23

| Measured quantity | Measuring range | L1 | L2 | L3 | $\Sigma$ | Class |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

tr_I - Ratio of current transformer = Primary current of transformer / Secondary current of current transformer, tr_U - Ratio of voltage transformer = Primary voltage of transformer / Secondary voltage of voltage transformer,
${ }^{1)}$ Clasc 0,5 S acc. to PN-EN 62053-22

## Power consumption:

- in power supply circuit
- in voltage circuit
- in current circuit

Readout field
Relay outputs (A1, A2)

## RS485 serial interface

## Ethernet Interface

## Sampling

## Harmonics

## Real-time clock

## Recording

$\leq 6 \mathrm{VA}$
$\leq 0.5 \mathrm{VA}$
$\leq 0.1 \mathrm{VA}$ ( $1 / 5 \mathrm{~A}$ ); $\leq 2.0 \mathrm{VA}$ ( 63 A )
LCD display $20 \times 4$ rows; white background, black characters
2 programmable relays, volt free NO contacts, resistive load 0.5 $\mathrm{A} / 250 \mathrm{~V}$ a.c. or $5 \mathrm{~A} / 30 \mathrm{~V}$ d.c.
Number of switchings: mechanical minimum $5 \times 10^{6}$
electric minimum $1 \times 10^{5}$
Modbus RTU 8N2,8E1,8O1,8N1. Address 1..247,
Baud rate 4.8, 9.6, 19.2, 38.4, 57.6, 115.2 kbit/s maximum time to commence the response: 600 ms

10/100 Base-T, RJ45 socket, Web Server. FTP server.
Modbus TCP/IP server, DHCP client
A/C converter 16-bit
Sampling rate 6.4 kHz for 50 Hz 7.68 kHz for 60 Hz

Simultaneous sampling across all channels, 128 samples per period
Harmonics series (n) 1.. 63
The harmonic distortion factor referred to the fundamental component of THD voltage, THD current waveform ( $n=2 . .63$ ) 0,0 .. 100.0 \%
FFT analysis (Fast Fourier Transform),
$\pm 20 \mathrm{ppm}$, battery of real time clock CR1220
Archiving period (recording interval) $1 . .3600 \mathrm{sec}$.
Recording start modes: n_on, noFF, on,oFF, H_on, HoFF, 3non, 3noF, 3_on, 3_oF,
Recording time: depends on the recording interval, e.g. for 1 second interval it is about 220 days.
8GB file archive memory

## Terminals

Cross-section
wire
cable
Clamping screws
Tightening torque
direct connection (63A) indirect connection (1/5A)
$2.5 . .16 \mathrm{~mm}^{2} \quad 0.2$.. $5.3 \mathrm{~mm}^{2}$
4 .. $16 \mathrm{~mm}^{2} \quad 0.2$.. $5.3 \mathrm{~mm}^{2}$
M5

Degree of protection provided by housing

| $\quad$ from the front side | IP 50 |  |
| :--- | :---: | :---: |
| terminals | IP 00 |  |
| Weight | 0.3 kg |  |
| Dimensions | $105 \times 110 \times 60 \mathrm{~mm}$ |  |

## Reference conditions and rated operating conditions.

## Standards met by the meter

## Electromagnetic compatibility

- immunity in industrial environments DIN EN 61000-6-2
resistance to induced common voltages of radio frequency:
- level 2 in the frequency range of 0.15 .. 1 MHz ,
- level 3 in the frequency range of $1 \mathrm{MHz} . .80 \mathrm{MHz}$,
- noise emission acc. to EN 61000-6-4

## Safety requirements:

according to PN-EN 61010-1 standard

- insulation between circuits: basic,
- installation category III for voltages up to 300 V in relation to earth
- installation category II for voltages up to 600 V in relation to earth
- degree of pollution 2
- maximum operating voltage relative to earth
- for power circuits and relay outputs 300 V
- for measurement input 500 V
- for RS485, Ethernet circuits, analog outputs: 50 V
- altitude $<2000$ m

## 16 ORDERING CODES

Ordering code of NR30 meter of power network parameters.
Table 24

| Meter of Power Network Parameters $\quad$ NR30 | X | X | X | X | XX | X | X |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Input current In |  |  |  |  |  |  |  |
| 1/5 A (X/1; X/5) | 1 |  |  |  |  |  |  |
| 63 A | 2 |  |  |  |  |  |  |
| Input voltage (phase/phase-to-phase) Un |  |  |  |  |  |  |  |
| $3 x 57.7 / 100 \mathrm{~V}$ to $3 \mathrm{x} 100 / 170 \mathrm{~V}$ |  | 1 |  |  |  |  |  |
| $3 \times 230 / 400 \mathrm{~V}$ to $3 \times 400 / 690 \mathrm{~V}$ |  | 2 |  |  |  |  |  |
| Interfaces |  |  |  |  |  |  |  |
| RS485 and Ethernet |  |  | 2 |  |  |  |  |
| Power supply |  |  |  |  |  |  |  |
| 85.. 253 V a.c., 90.. 300 V d.c. |  |  |  | 1 |  |  |  |
| $20 . .40 \mathrm{~V}$ a.c., 20.. 60 V d.c. |  |  |  | 2 |  |  |  |
| Version |  |  |  |  |  |  |  |
| standard |  |  |  |  | 00 |  |  |
| with S4AO*: 4 current outputs 0/4 .. 20 mA |  |  |  |  | 01 |  |  |
| with S4AO*: 4 voltage outputs $0 . .10 \mathrm{~V}$ |  |  |  |  | 02 |  |  |
| with S4AO*: 4 outputs ( 2 groups $1 \times 0 . .10 \mathrm{~V}+1 \times 0 / 4 . .20 \mathrm{~mA}$ ) |  |  |  |  | 03 |  |  |
| supervisory relay |  |  |  |  | SR |  |  |
| custom-made** |  |  |  |  | XX |  |  |
| Language |  |  |  |  |  |  |  |
| Polish/ English |  |  |  |  |  | M |  |
| other** |  |  |  |  |  | X |  |
| Acceptance tests: |  |  |  |  |  |  |  |
| without additional requirements |  |  |  |  |  |  | 0 |
| with quality inspection certificate |  |  |  |  |  |  | 1 |
| with calibration certificate |  |  |  |  |  |  | 2 |
| acc. to customer's requirements* |  |  |  |  |  |  | X |

* 4-channel S4AO analog output module will be made in English language version with the same power supply as the ordered NR30 meter, unless the customer specifies otherwise. The S4AO module communicates with the NR30 meter via the RS485 Modbus Master interface, therefore cooperation with S4AO excludes the use the NR30 meter RS485 interface for communication with another Master.
*after agreement with the manufacturer

SAMPLE ORDER, code NR30 112100M0 means:
NR30 - NR30 meter,
1 - input current 1A/5A (X/1; X/5),
1 - input voltage $3 \times 57.7 / 100 \mathrm{~V}$ to $3 \times 100 / 170 \mathrm{~V}$,
2 - RS485 and Ethernet,
1 - power supply $85 . .253 \mathrm{~V}$ a.c., $90 . .300 \mathrm{~V}$ d.c.
00 - standard version,
M - Polish-English language version,
0 - without additional requirements.
